

Integrative Therapeutics

Gemmotherapy

Specialized Homeopathic remedies made from embryonic plant stem cells . Plant stem cells cannot reproduce an organ like human stem cells, but they can detox and nourish, which human stem cells can't do. Also known as 'drainage remedies', gemmos enhance the body's own powers of excreting toxins. Their nutritive and repair activities of the gemmos support cellular tissue growth and regeneration.

Tissue Salts

Tissue salts, also known as cell salts, are homeopathic remedies made from the 12 eternal biochemical mineral compounds that are found in the body. They play an important role as nutrient biocatalysts in the body. A deficiency in one or more of these ever present mineral compounds contributes to the disease process.

Organ Specifics

Homeopathic remedies which have a narrow range of action and that are known to act upon a specific organ or system of the body. They support the healing process when the focal point of the disease is an organ of the body or a bodily system that is the weak link.

Lesional Therapeutics

Homeopathic remedies that address tissue destruction and end-stage pathologies that are no longer reversible. Lesional therapeutics includes palliative care for acute traumas and end stage chronic diseases.

Homeoprophylaxis

Disease prevention using homeopathic agents to immunization against future infections. Homeoprophylaxis does not attempt to mimic conventional vaccinations. It is a completely different and unique method for reducing the likelihood of developing the symptoms of an infectious disease if exposed to it.
